Forge Welding Arm

- The tabletop is an adjustable work support. It holds the metal pieces or assembly at a convenient height while you weld, helping keep them stable and aligned. It may also support small tools or welding accessories.
- The arm clamp is used to hold the metal workpiece securely while you weld.
- It helps:

Keep pieces aligned and steady
Hold parts at a chosen angle or height
Leave both hands free for the welding torch and filler rod
Reduce movement and distortion during tack welds
