Vizitech USA is excited to introduce the Virtual Reality (VR) Forensics learning system. The system is established to provide the fundamentals of Crime Scene Investigation for the new student/refresher training for the veteran officer. VR Forensics places the student in a virtual work setting with negligible interruptions where the instructor can control their experience. Learning comes from the experience of processing the crime scene in accordance with institutional policies and procedures.

VR Forensics consists of two learning modules: the Evidence Collection Module and the Blood Spatter Analysis Module. In the Evidence Collection module, the student/team is immersed in scenarios to learn the different tools available to process a crime scene. There are 36 scenarios. This allows several options for the student/team to develop the skills needed to process a scene, collect the evidence, and prepare their interpretation of the facts of the crime scene.

The VR Forensics Evidence Collection module can:

- improve the techniques of the current CSI teams.
- create a baseline of Forensic knowledge for the student/teams.
- improve the organization's policies.
- be used as a validation tool for policy changes.

The second learning module is the VR Forensics Blood Spatter Analysis Module. This module provides immersive scenarios to learn the different tools available to the student as they process blood spatter from a crime scene.

Changing The Away America Learns

VIZITECH USA

VR FORENSICS

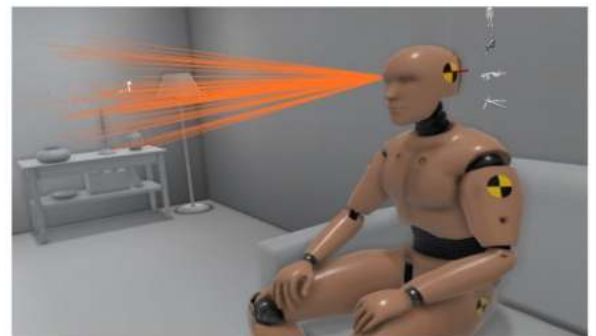

There are several options for the student/team to develop the skills needed to process a scene, collect the evidence, and prepare their interpretation of the facts based upon analysis of blood spatter of the crime scene.

The VR Blood Spatter Analysis Module can:

- improve the techniques of the current CSI teams.
- create a baseline of Blood Spatter Analysis knowledge for the student/teams.
- improve the organization's policies.
- be used as a validation tool for policy changes.

The VR Evidence Collection learning system comes with all necessary VR hardware, VR laptop computer and VR Forensics software installed. The cost for the training platform includes software and technical support for one year.

Vizitech USA stands ready to support your training needs. Please contact us for more information on our line of products and support.
